User Manual

HRM-System

Release 0.0.

Contents

Part 1 Diagrams and how the system works **(page 3)**

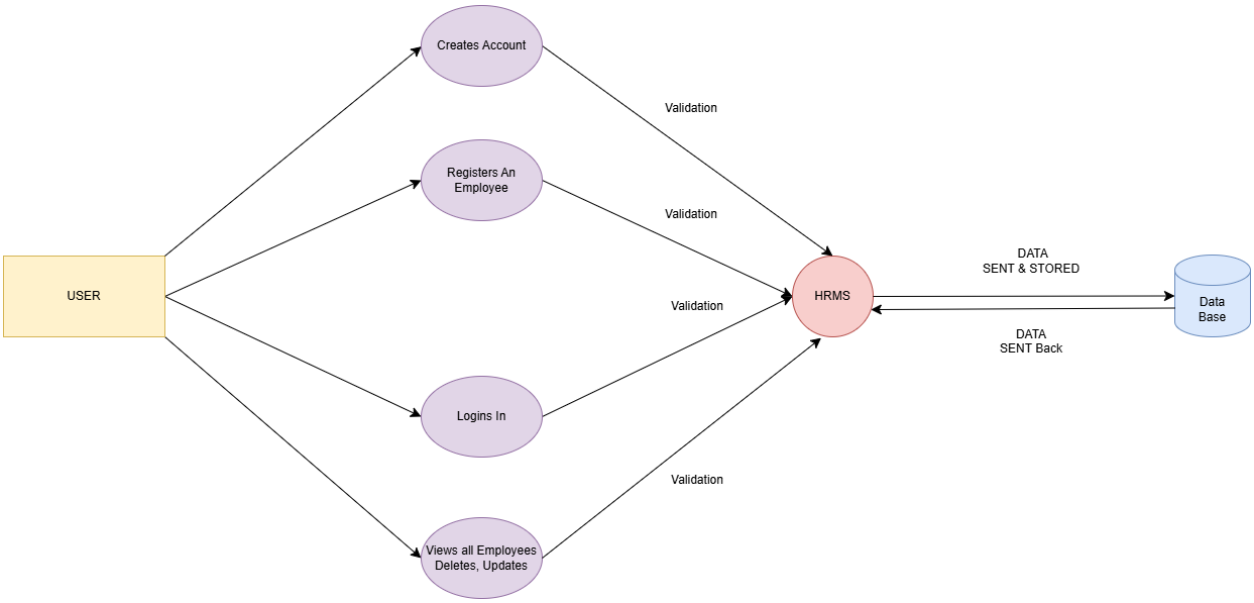
Part 2 Design -User Interface Development **(page 4)**

Part 3 Database Structuring **(page 5)**

Part 4 Security **(page 5)**

Part 5 How to login and register / user manual **(page 6 to 11)**

Part 1 Diagrams and how the system works



Visual Explanation

How the system works

1. The System is connected to a data base and communicates the needs of the user to with the data base than the data base stores the information, when the data is needed by the user the HRMS(Human Resource Management System) than retrieve's the data from the database
2. When the user starts a process like creating an Account for example they fill a form with their information that information is than sent to the to the HRMS(Human Resource Management System) for validation than if the data sent is ok, than its sent to the data base to be Stored

Part 2 Design -User Interface Development

We need to create a clean user friendly design using Css and Html

Login and register

- High contrast design
- Simple to understand text areas
- Button to submit

Dashboard

- High contrast design
- Main content – Welcome message for user
- Two cards that have buttons that will take user to the page they want

Employee Registration

- High contrast design
- Form to insert information
- Button to submit

Employee List

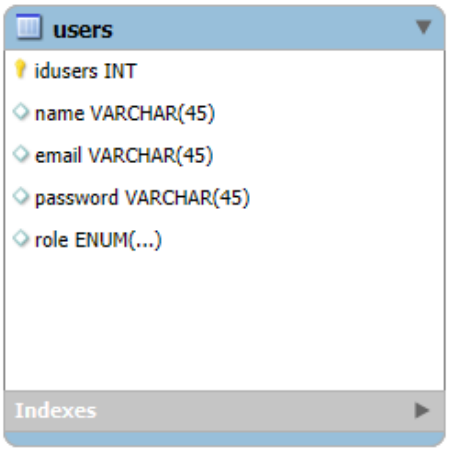
- High contrast design
- Table to view the Employees
- Include options to view, update, and delete individual employee records

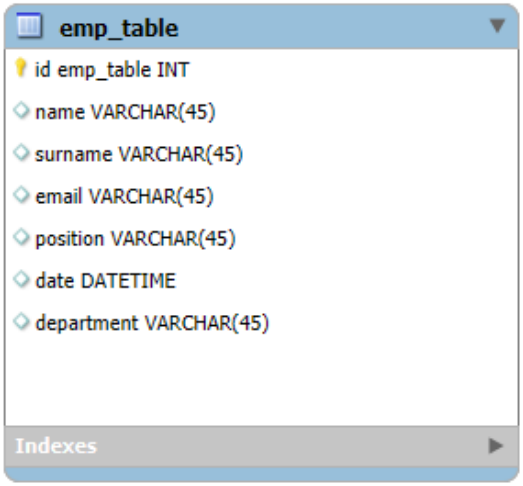
Profile

- High contrast design
- Main content with a more detailed summary of that employees information

Part 3 Database Structuring

We will create and SQL data base with two tables one for the users to help with registration and the another for the employees these tables will not have any relationships to each other





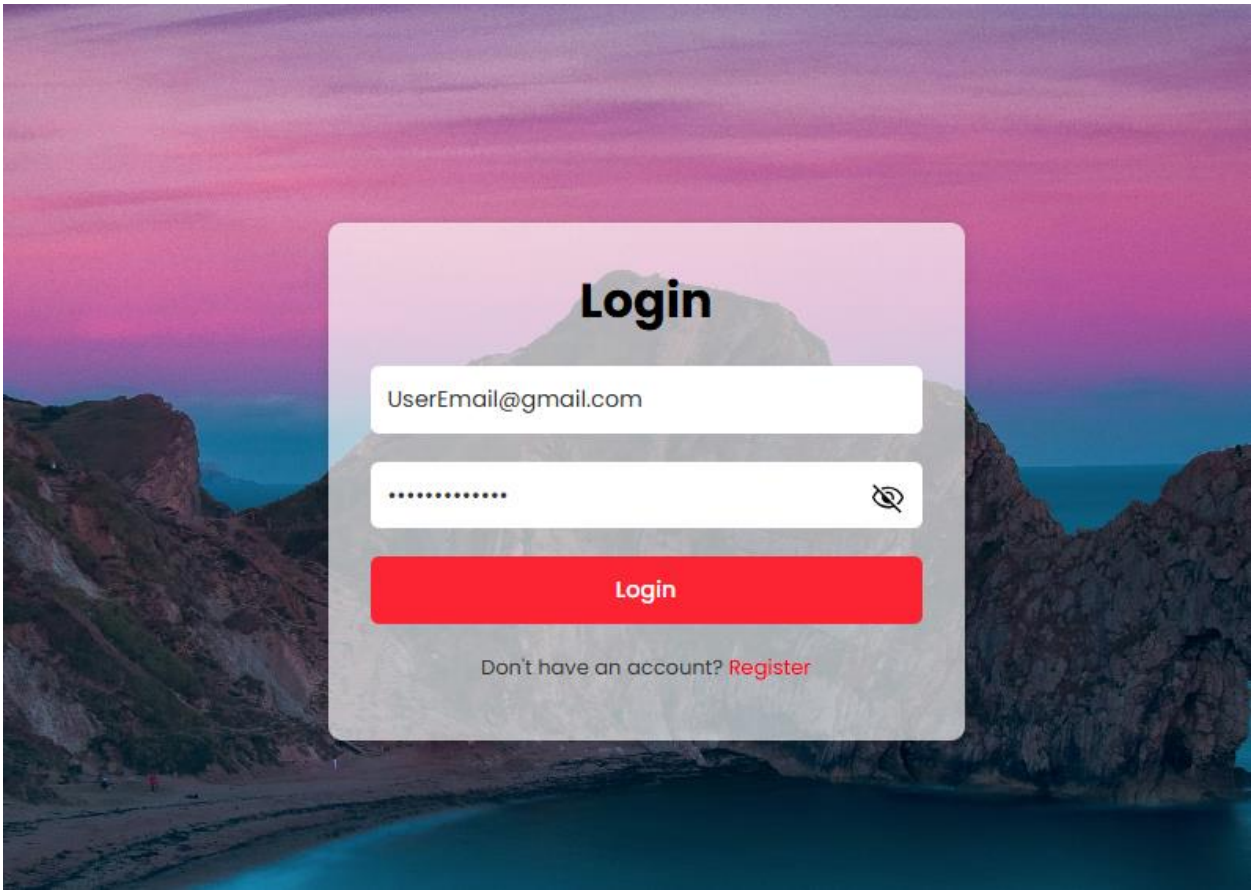
Part 4 security

I will use and Implement measures to prevent SQL injection attacks. This may include using prepared statements in PHP.

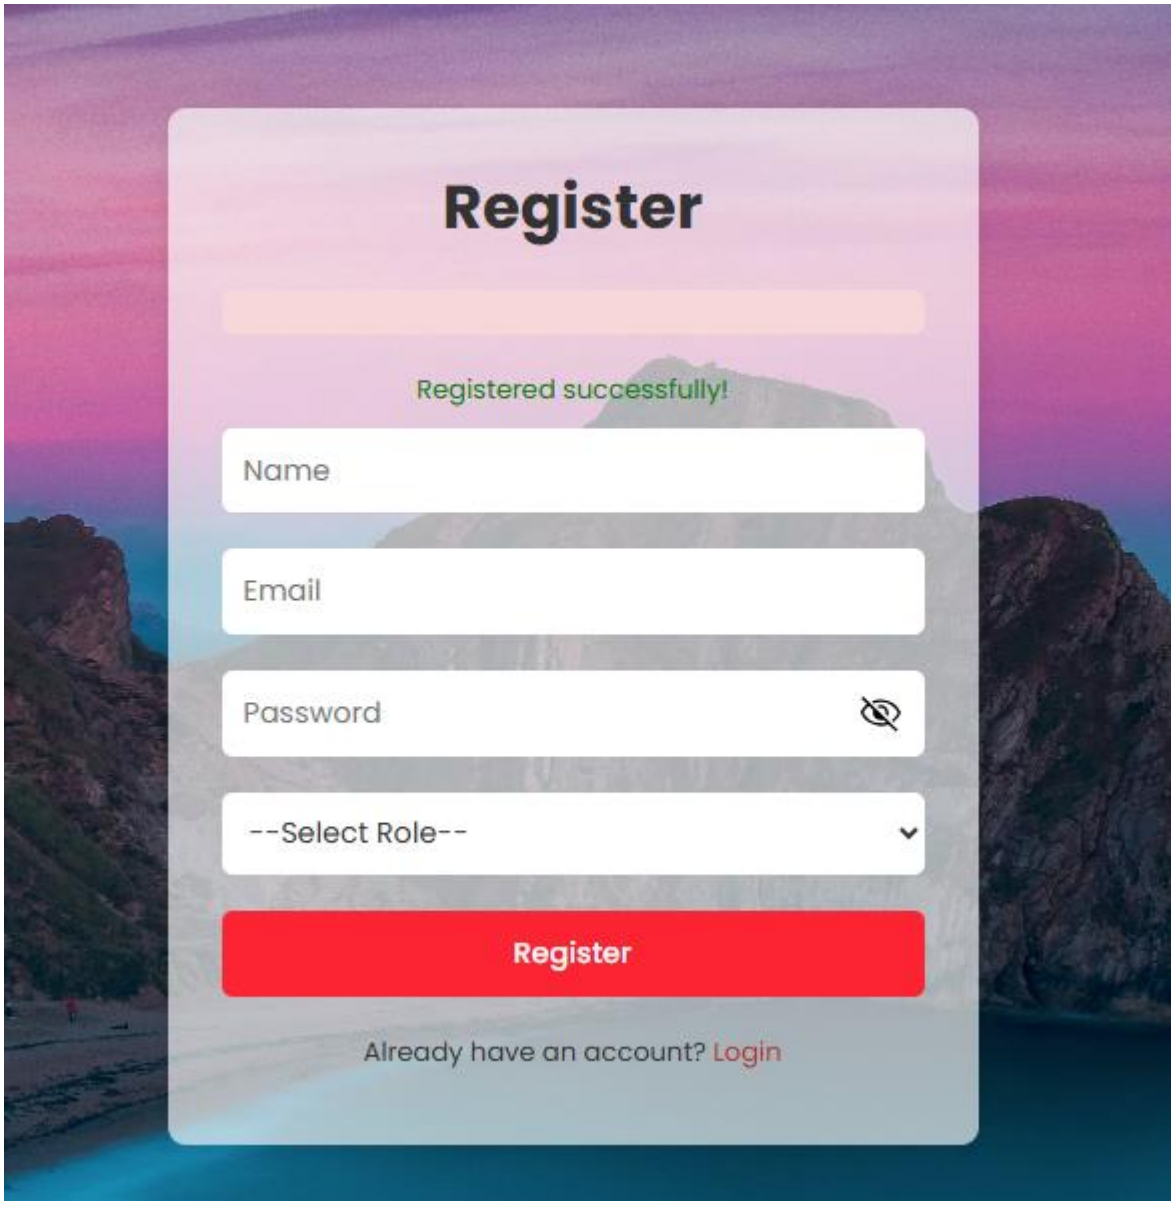
```
$stmt = $conn->prepare("SELECT email FROM users WHERE email = ?");
$stmt->bind_param("s", $email);
$stmt->execute();
$stmt->store_result();
```

Part 5 How to login and register / user manual

To login insert your Email and password that you used when you registered if you you haven't registered than click the register link at the bottom underneath the button and you will be sent to the register page

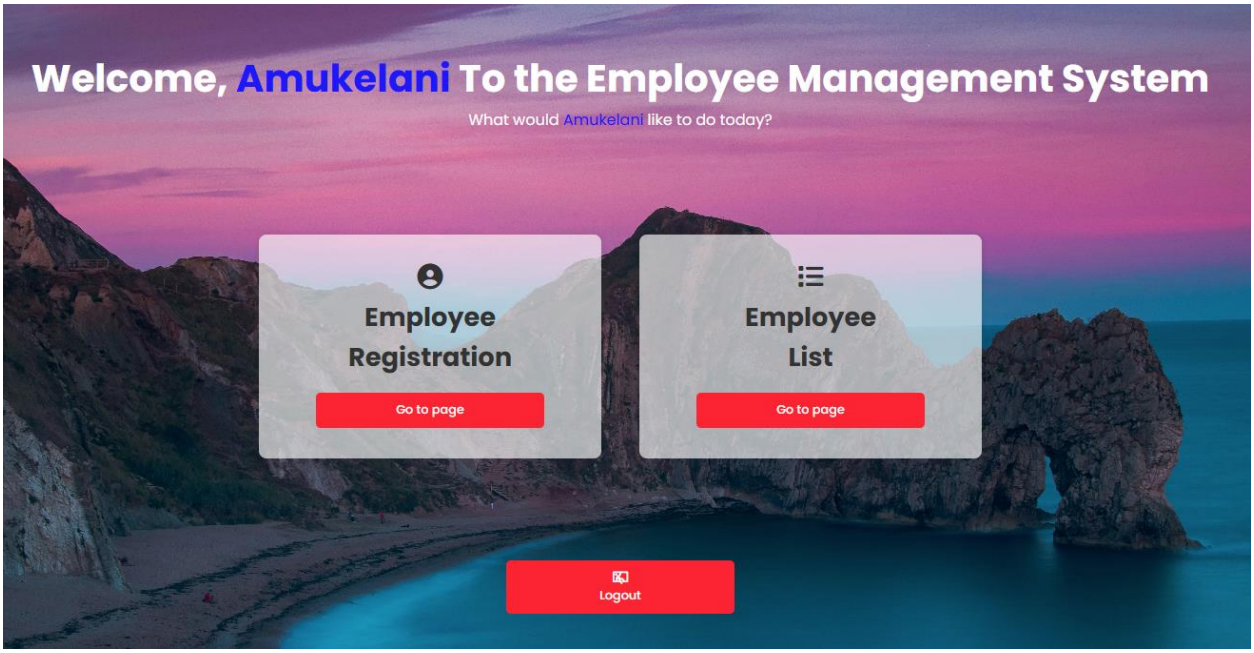


To Register fill in all the inputs insert your information than click the register button if successful than the page will notify you



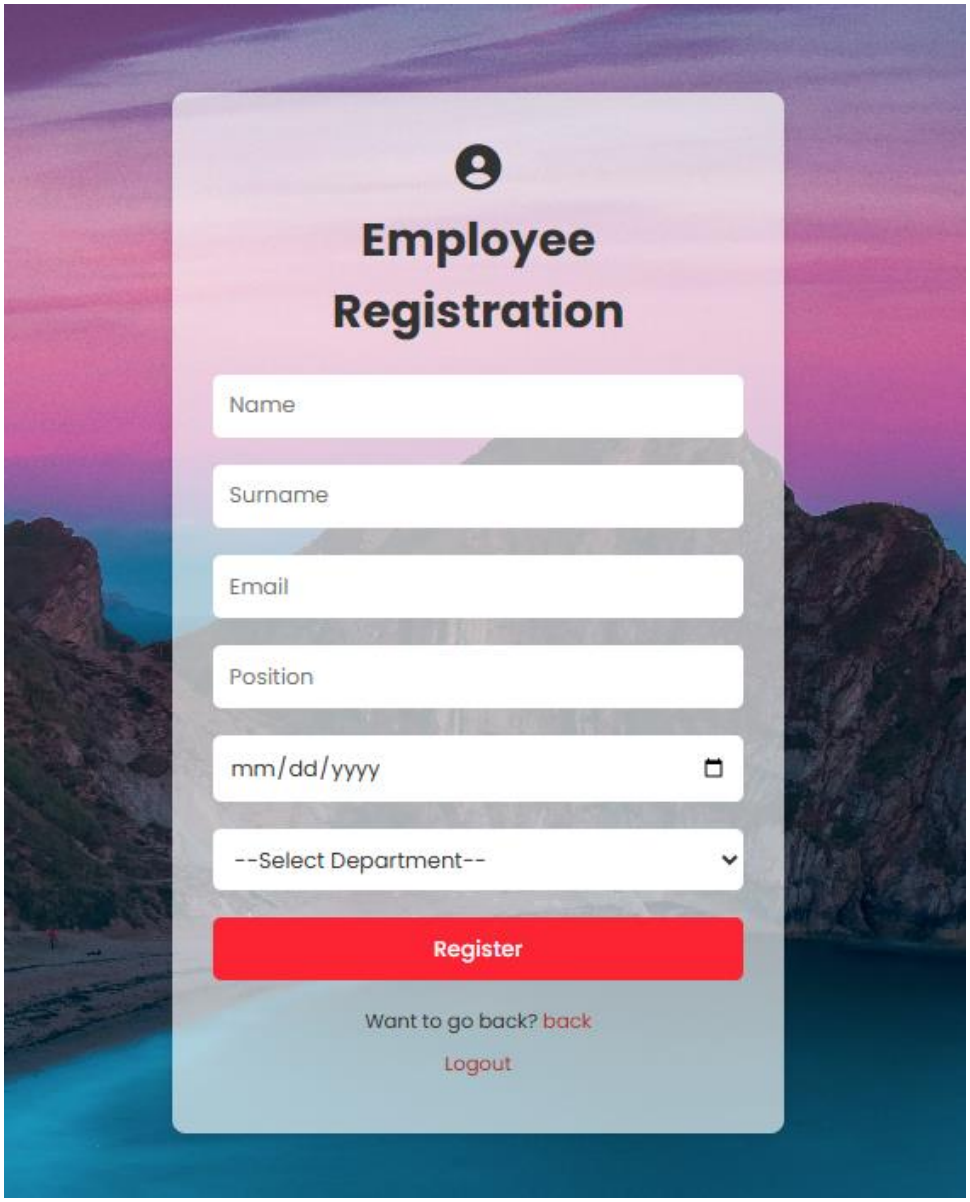
The Dashboard

On the dashboard you will see two cards the employee registration and employee list card with both having buttons in them they will take you to the pages than at the bottom you have the logout button which you will press to logout and end the session.



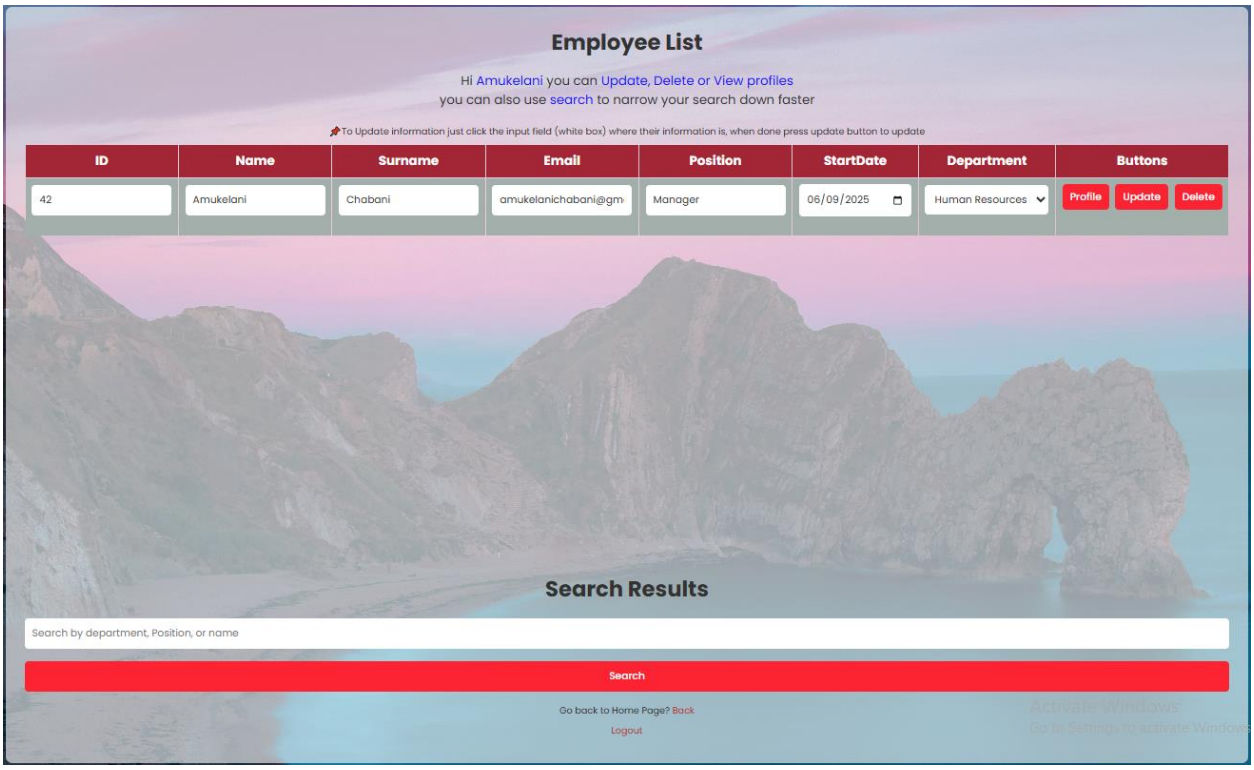
Employee Registration

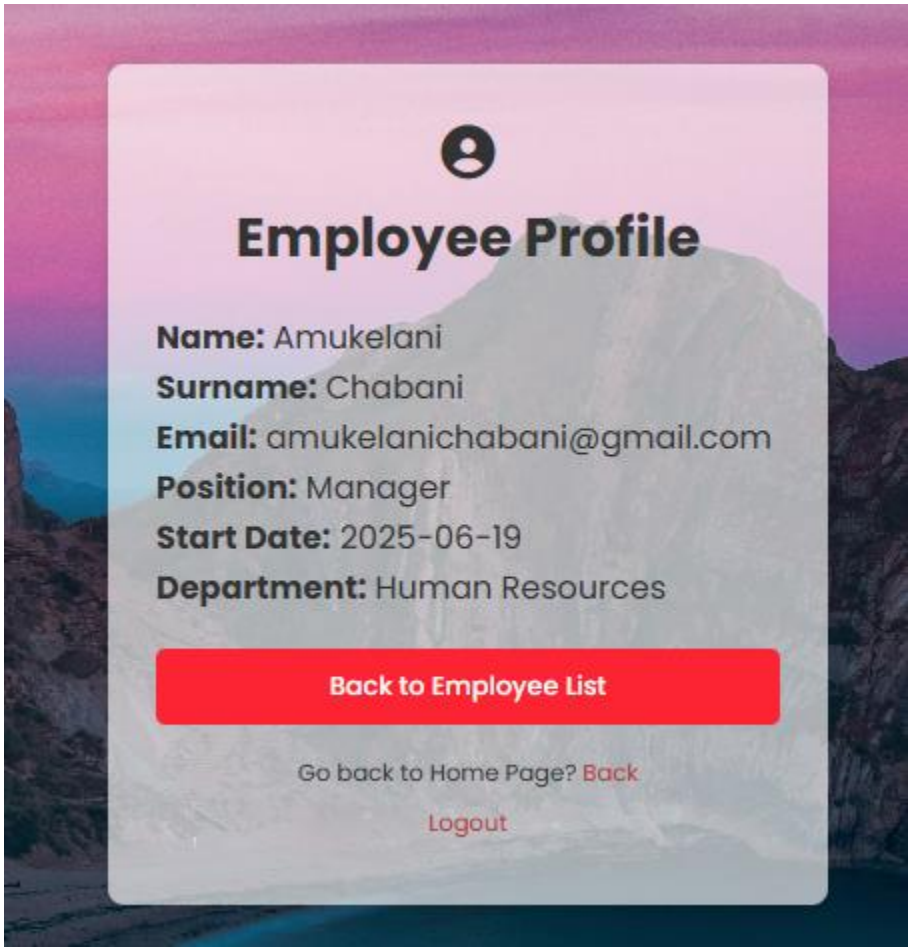
If you clicked the **Employee Registration** button you will see this page To Register fill in all the inputs insert your information than click the register button if successful than the page will notify you any errors will also be notified.



Employee List

If you clicked the **Employee List** button you will see this page in this page you have the ability to view, update, delete and search all employees in the Data base by simply pressing the buttons and when you press the profile button you can see a more detailed summary of that employees information



Profile


profile button you can see a more detailed summary of that employees information
